

FIG2006

Automated Road Sign Inventory Solution

Presenter: Claude Laflamme
Director of R&D

PRESENTATION OVERVIEW

- ◆ Geo-3D Introduction
- ◆ System components
- ◆ Data Extraction
 - Detection
 - Recognition
 - Results
- ◆ Applications & Benefits
- ◆ Conclusion

GEO-3D OVERVIEW

Geo-3D's mission - develop and commercialize worldwide, highly productive land and aerial data collection solutions as applied to linear infrastructure assets over large territories.

- **Created: 1995**
- **ISO 9001 (2000)**
- **20 employees**

GEO-3D OVERVIEW

◆ Mobile Mapping Markets:

- Public Sector (Train, Bus, etc.)
- Transportation (Road, Rail, Maritime, etc.)
- Utilities (Telecom, Electric, Cable, Gas, etc.)
- Public Works (Municipalities, Counties, etc.)
- Real Estate (Addressing, Property Assessment, etc.)
- Public Safety (Homeland Security, Emergency Services, etc.)

◆ Our Priority:

- Roadside Assets

GEO-3D OVERVIEW

- Over 100 Customers
- Spread Across More Than 12 Countries
- 27 Installed Vehicles
 - USA (9), Including 3 DOTs (New Jersey, Montana, Louisiana)
Ensco, (July 2006)
 - Canada (9) most recent **NB DOT (March 2006); Associated Engineering (April 2006)**
 - Europe (8): Belgium (2), France(3), Portugal(2), UK(1)
 - South Africa (1)
 - China (1)

 - ...And many indirect customers (Municipalities, counties)

TRIDENT-3D SOLUTION

Variable Vehicle Configurations

TRIDENT-3D - KRONOS

Hardware components

- Digital camera and other sensors
- Inertial measurement unit
- Differential GPS receiver
- Data acquisition software - Kronos
- Rack mount industrial computers
- 2-D scanning laser (for automated detection)

TRIDENT-3D - KRONOS

Vehicle Set-Up

TRIDENT-3D - KRONOS

Kronos™: Data Acquisition (Video Logging)

The screenshot displays the Kronos software interface. The main window shows a live video feed of a road scene with a sign for 'Boul. Mortagne'. The interface includes several control panels and status indicators:

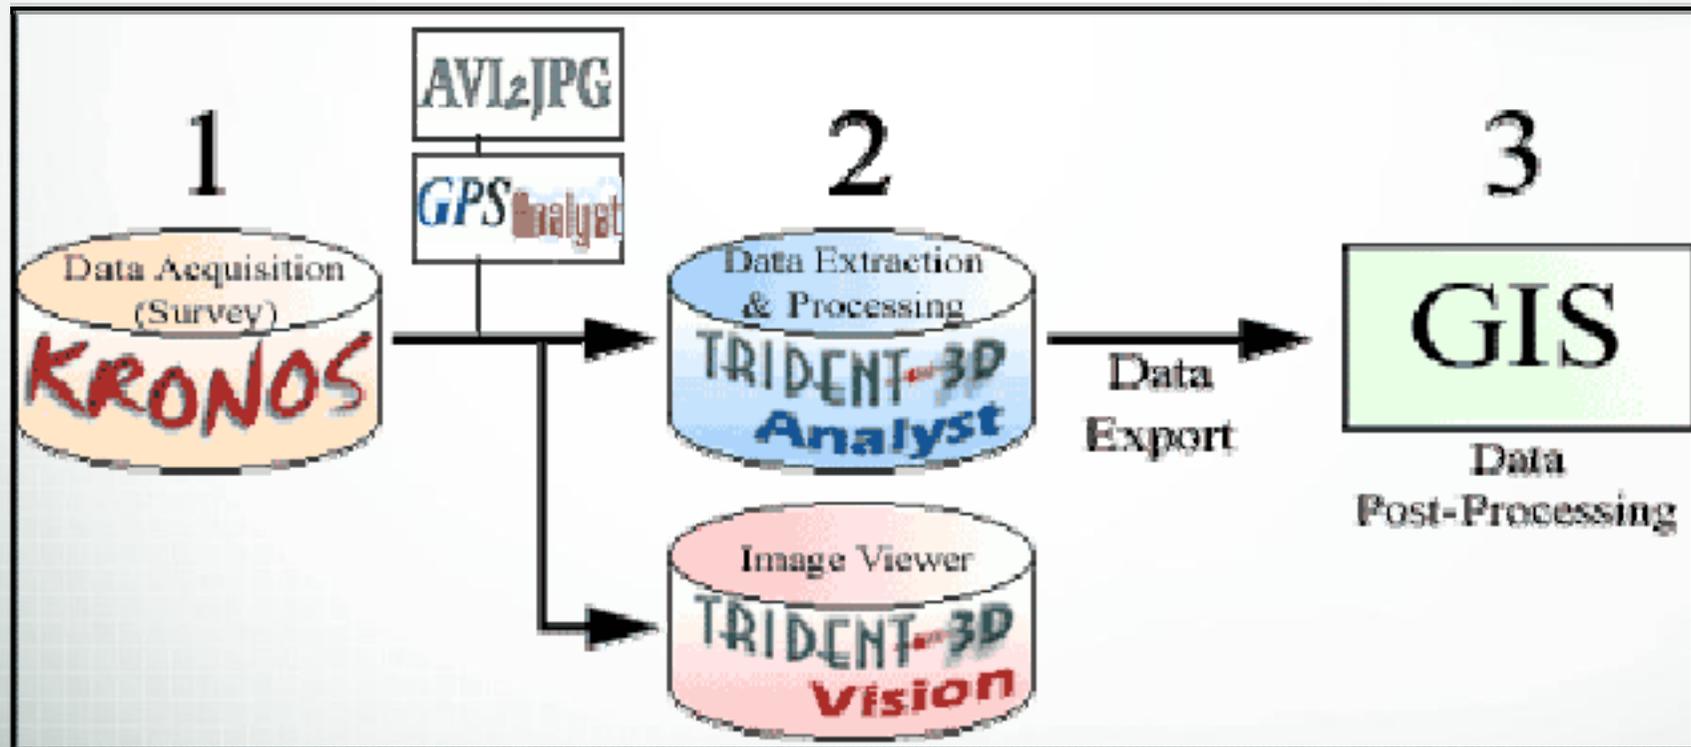

- GPS Data:** Time: 50260, Latitude: 4529.2241, Longitude: -7328.0182, Altitude: -0.9, SV Count: 5, Age: 3, Speed: 0.
- Configuration:** Buttons for Configuration, Close, Color Control, Help, View Map, and About.
- Camera Adjustment:** Sliders for Exposure (set to 83), Shutter (set to 1/14.9 sec), and Gain.
- Buttons:** F5, F9, and a key icon.
- Status:** Gps State: Connected (indicated by a green light).
- File Management:** Current Drive: 35826 Meg, Clip size: 0 Meg, Clip name: C:\KronosSample.avi, Auto file incrementation checked.
- Footer:** GPS Com port: 1, GPS baud: 19200, GPS Mode: NMEA, Distance between frames: 5.000000, Map Navigator: Off, Device: Unibrain Fire-I 1394 Camera Driver (Sony).

TRIDENT-3D SOLUTION

Software Architecture

TRIDENT-3D Mobile Mapping Solution

TRIDENT-3D SOLUTION

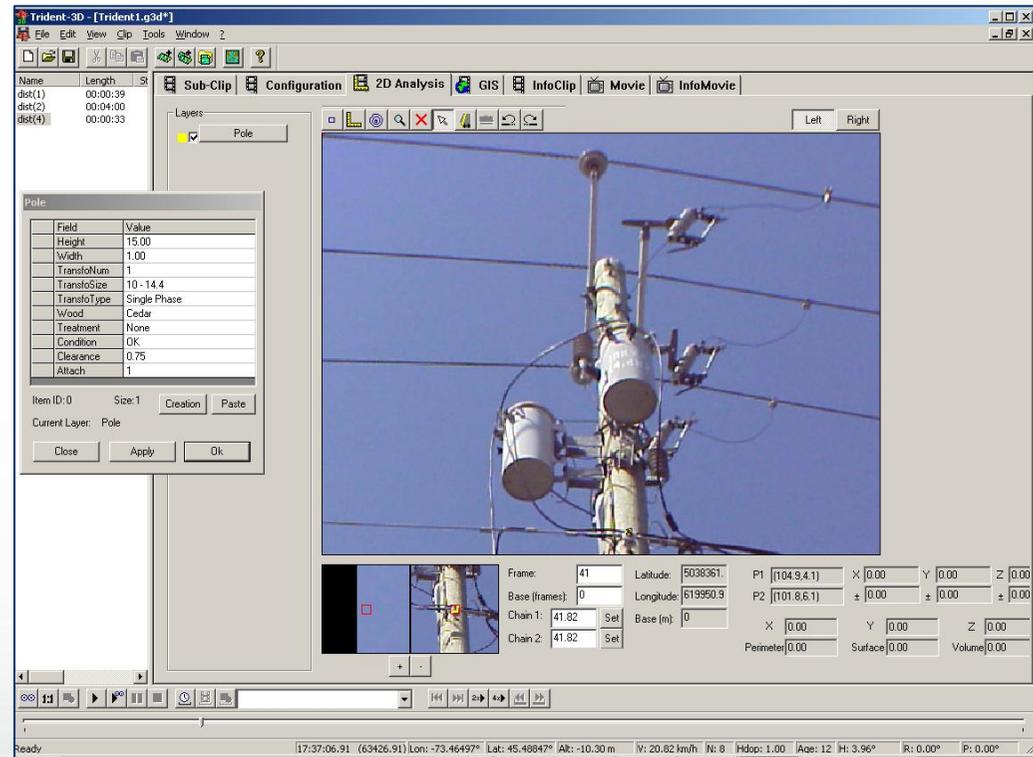

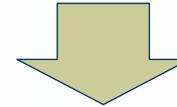

Data extraction based on photogrammetric principles using only one camera (US Patent Pending)

TRIDENT-3D - ANALYST

Data Extraction Software Interface

- Position in X, Y & Z; sub-metric
- Length, height, area measurements
- Zoom function
- 3D Map interface
- Integrated GIS functions
- ODBC connectivity
- And more...

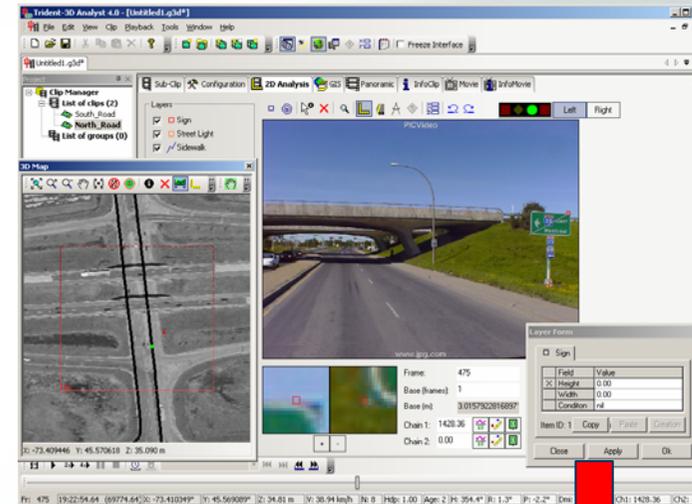

GIS Connection

- ◆ ESRI Shape file export (SHP, SHX, DBF)
- ◆ ODBC connectivity
 - Connects layers to any ODBC data source (SQL server, Oracle, Access, DB2, etc.)
- ◆ Support for Relations
 - E.g. one support with traffic signals and multiple signs
- ◆ API to connect to Asset Management, GIS Clients, etc.

TRIDENT-3D – ANALYST

Manual Asset Extraction

- ◆ Approximately 2 minutes per asset
- ◆ Location extraction from user manipulation
- ◆ Measurements from user manipulation (high level)
- ◆ Human error creates possibility of mistakes

The close-up of the 'Layer Form' dialog box shows the following details:

- Checkbox: Sign
- Table:

Field	Value
Height	3
Width	2
Condition	Fair
- Buttons: Item, Copy, Paste, Creation
- Buttons: Close, Apply, Ok

TRIDENT-3D - ANALYST

AUTOMATION

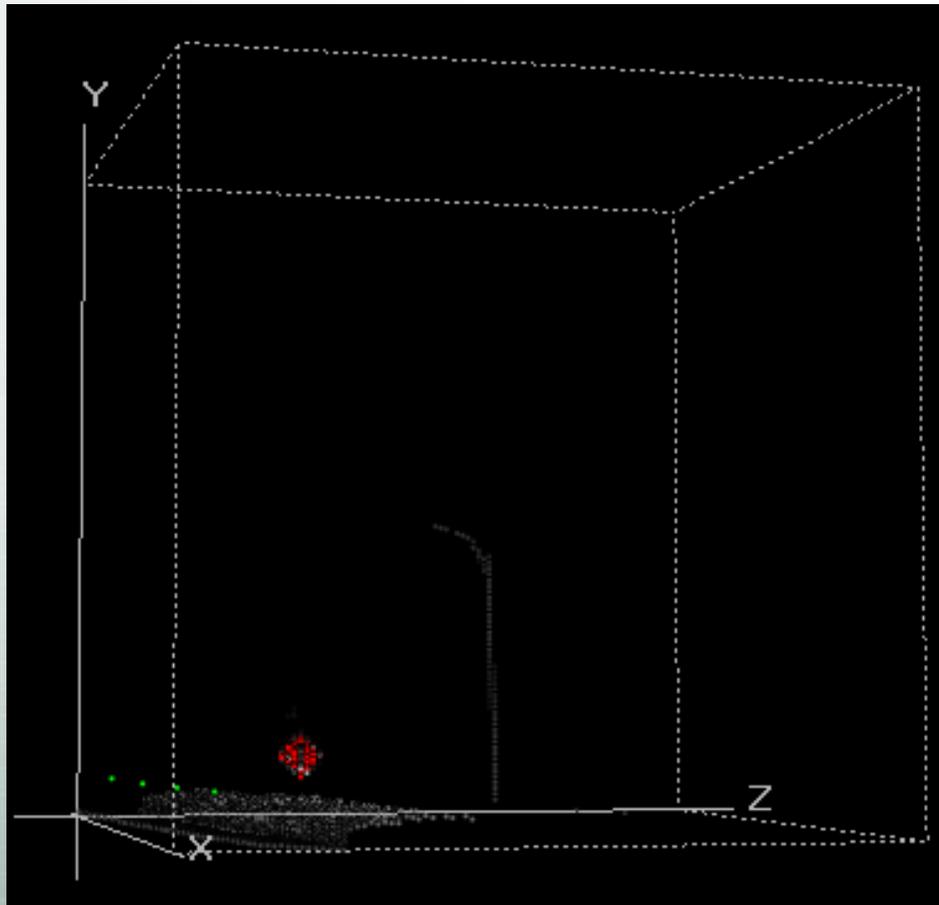

- ◆ Market pressure dictates need to reduce time and economic resources required for surveys
- ◆ 2 Dimensional laser scanning device is mounted on survey vehicle
- ◆ Collects a wealth of data
- ◆ Automation of:
 - **Detection**
 - **Location**
 - **Recognition**
 - **Measurements**

TRIDENT-3D - ANALYST

Automatic Asset Detection

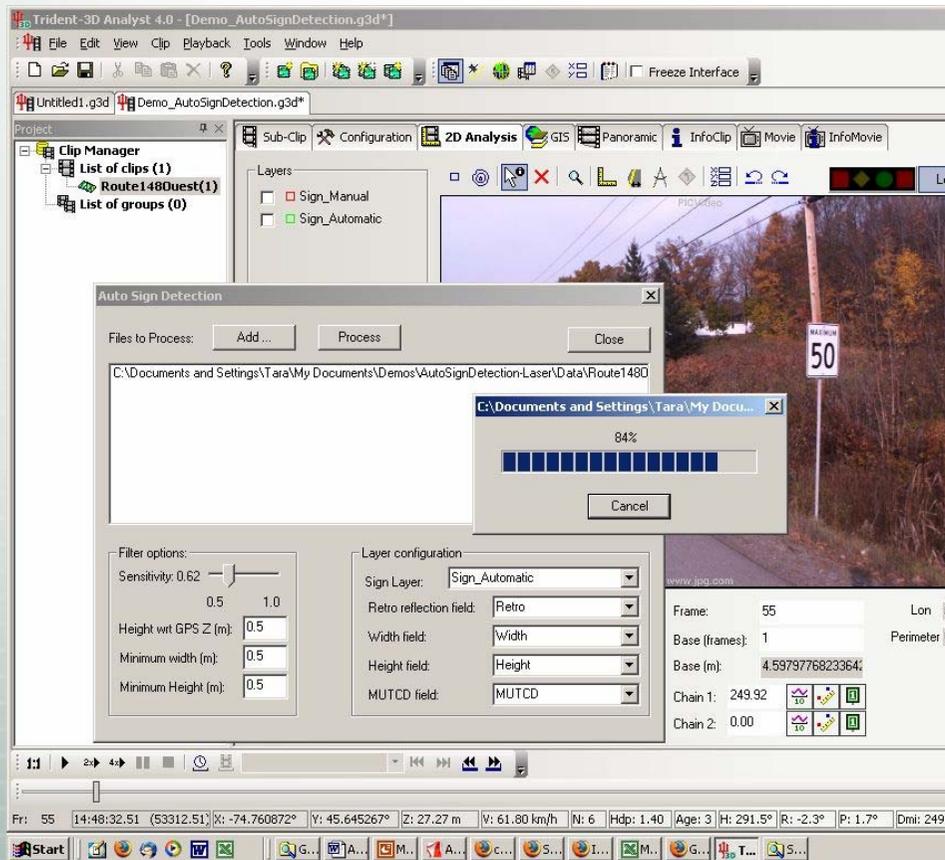

- Generate a 3D point cloud

- 3D objects are distinct

- Agglomeration of points are objects

TRIDENT-3D - ANALYST

Automatic Asset Detection

• Assets distinguished from surrounding environment

• Achieved through the use of a plurality of filters and parameters

• Geographical position assigned & measurements made

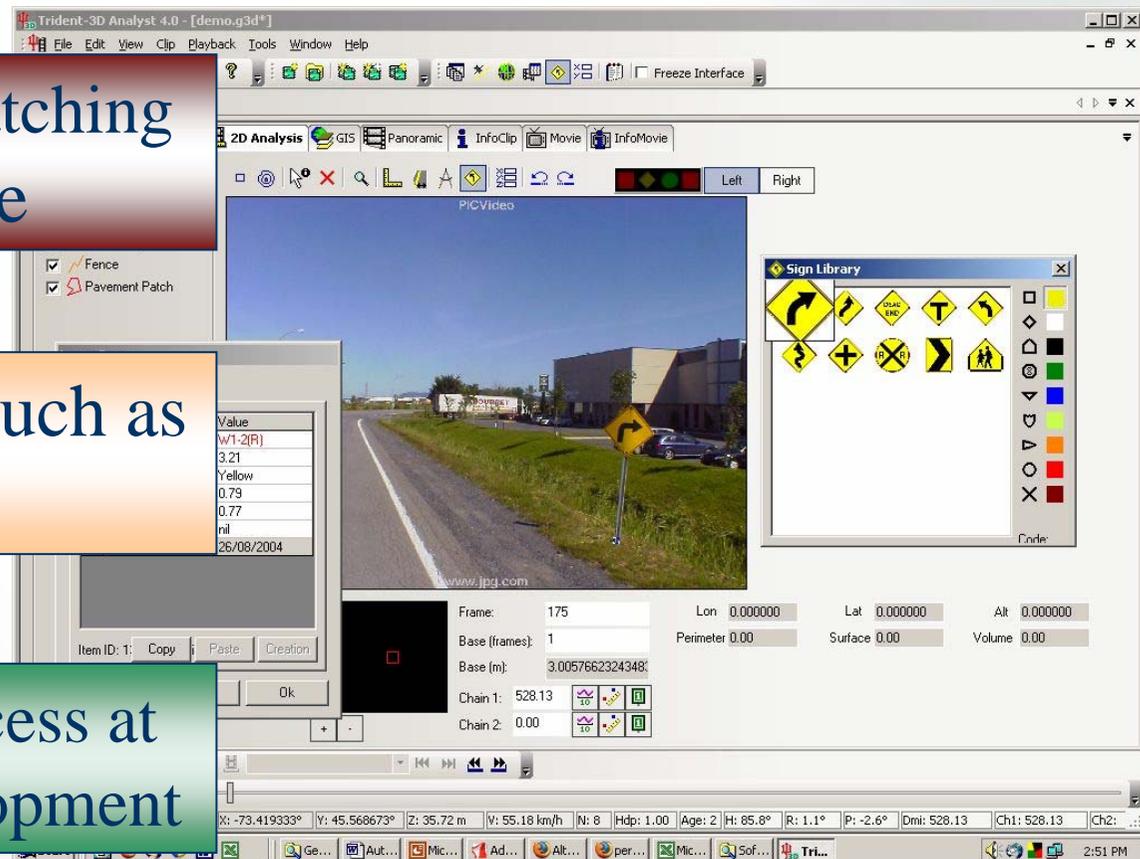

TRIDENT-3D - ANALYST

Automatic Asset Recognition

- Asset identified as matching template from database

- Road sign libraries such as MUTCD can be used

- Semi-automatic process at current stage of development

TRIDENT-3D - ANALYST

Preliminary Testing of Automation

- ◆ Survey performed on Route 148 in Quebec, Canada (between Lachute & Gatineau)
- ◆ Evaluation of precision, timing, detection and accuracy rates of automated technology vs. manual extraction

Preliminary Testing of Automation

TEST

- ◆ Length 23.7 miles (37.8 km)
- ◆ 416 signs detected, located and measured
- ◆ Processing time 90 sec

Verification + MUTCD

- ◆ 16 false detections (<9%)
- ◆ 1 missed sign (<1%)
- ◆ Time 45 min (15 sec/sign)

TRIDENT-3D ANALYST

Automation PRELIMINARY RESULTS

	Manual	Automatic
Detection / Locating / Measurement time	120 sec. / sign	15 sec. /sign
Detection rate	100 %	99 %
False detection	0 %	9 % (*urban)
Location precision*	Sub-Meter	Sub-Meter
Measurement accuracy	3% error	H:10% error W:30% error

Case study Projects

City of Tethford Mines, Quebec

- ◆ Determine Laser robustness
- ◆ Efficiency of solution in urban setting

Road profiling

- ◆ Determine street transverse slope
- ◆ Determine shoulder and ditches slopes

TRIDENT-3D APPLICATIONS

Other Applications for Automation

- ◆ Shoulder profiling
- ◆ Curb height measurements
- ◆ Clearance measurements
- ◆ Reflectivity measurements
- ◆ Cross section - Slope
- ◆ Limitless possibilities.....

CONTACT INFORMATION

9655 rue Ignace

DEMO Time !

TRIDENT-3D APPLICATIONS

- TRANSPORTATION & MUNICIPALITIES:

- Inventory of infrastructures & assets
- Automatic road sign detection and inventory
- Safety equipment (guardrails, reflectors, etc.)
- Traffic & street lights
- Pavement lines, markings, etc.

DISTRIBUTION OF ELECTRICITY & TELECOMMUNICATIONS

- Geopositioning of poles
- Identification of plates such as IRD, etc.
- Equipment identification
- Etc.

Benefits

- ◆ **Cheaper, faster & safer than traditional surveying methods**
 - Reduces operational costs
 - Does not slow or impede traffic
 - No workers on the roadside
- ◆ **Availability**
 - Data is accessible throughout the year
 - Offers high level of operational & project management flexibility

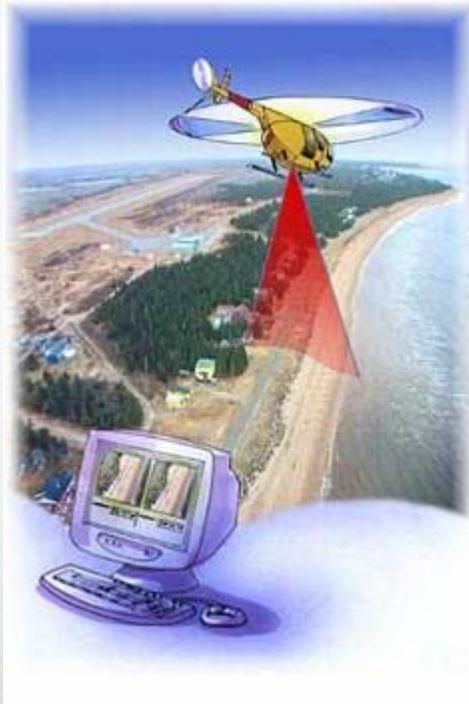

Benefits

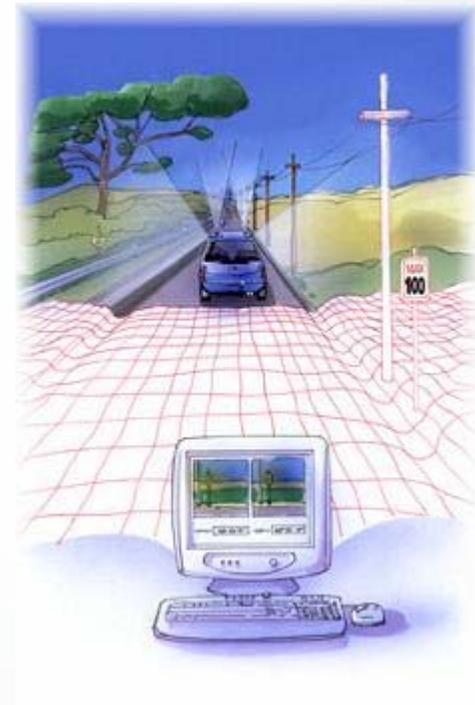

- ◆ **An integrated approach**
 - Open, modular & portable hardware
 - Tightly coupled link to GIS
 - Parallax created through use of single camera
 - User friendly & based on georeferenced image data
- ◆ **QA/QC & quality management**
 - Real time quality control during acquisition & extraction
 - ISO 9001

GEO-3D CONCLUSION

One Technology

Based on the use
of CCD
camera(s),
positioning
systems &
photogrammetry
