PLATINUM SPONSORS

# Creating Impact

POWERING  
NEW POSSIBILITIES  
FOR SOCIAL IMPACT  
**PUBLIC**  
FOUNDATION

Launched in July 2021, the **SDG Data Alliance** is a strategic **impact program** within **PUBLIC Foundation**, fostering economic resilience in developing nations, through **data-driven insights** and **innovative tools** and **technologies**.

A **multi-stakeholder partnership** comprising the **private sector**, **foundations**, **UN organizations**, and **local and national governments**, the Data Alliance brings **geospatial technology capabilities**, **resources** and **training** to **developing countries** (especially LDCs and SIDS) with the goal of **accelerating** the **achievement of national sustainable economic development**.

Our **vision** is for **governments** to be able to **achieve the SDGs** with **people, data, technology, and processes**, creating a just, healthy, and prosperous world where no one is left behind.

# Geography, the Geospatial Ecosystem, and Sustainable Development over the Past Decade

**UN-GGIM**  
 UNITED NATIONS  
 COMMITTEE OF EXPERTS ON  
 GLOBAL GEOSPATIAL  
 INFORMATION MANAGEMENT

	<b>Commission 1 – Professional Standards and Practice</b>		<b>Commission 6 – Engineering Surveys</b>
	<b>Commission 2 – Professional Education</b>		<b>Commission 7 – Cadastre and Land Management</b>
	<b>Commission 3 – Spatial Information Management</b>		<b>Commission 8 – Spatial Planning and Development</b>
	<b>Commission 4 – Hydrography</b>		<b>Commission 9 – Valuation and the Management of Real Estate</b>
	<b>Commission 5 – Positioning and Measurement</b>		<b>Commission 10 - Construction Economics and Management</b>

- We are all in this together as professionals and experts in our respective fields.
- Geospatial, survey, and mapping agencies are increasingly joining hands with property (cadastre, land, planning, registrars and valuation) agencies, as they become more heavily involved in 'location data'.
- These new working trends in our profession are affecting all our disciplines - positively.
- When we think about sustainable development and “Enabling Opportunities for a Digital Generation”, we must continue to Collaborate, Innovate, and be Resilient!

# Geography, the Geospatial Ecosystem, and Sustainable Development over the Past Decade

- **Artificial Intelligence (AI) and Machine Learning (ML):** Integration into geospatial data analysis to efficiently detect patterns, anomalies, or changes is accelerating.
- **Big Data and Cloud Computing:** To manage, process, and share geospatial data at scale, making advanced technologies more accessible to more users.
- **Internet of Things (IoT):** Integration of IoT devices with geospatial technologies enables real-time data collection and analysis.
- **3D Mapping and Virtual Reality:** Enabling more immersive and intuitive visualization of spatial data.
- **Location-based Services:** Demand for location-based services and location intelligence is growing.
- **Data Collection and Generation:** Drones, satellites, and LiDAR are redefining how geospatial data is collected.
- **Business Model Transformation:** Democratizing access to advanced geospatial technologies, making them more affordable and accessible.

# Geography, the Geospatial Ecosystem, and Sustainable Development over the Past Decade

## Sustainability is top of the agenda!

- **Sustainability and Environmental Monitoring:** Geospatial technologies are playing a crucial role in monitoring and managing the environment, including climate change, deforestation, and resource management.
- Geospatial technology has emerged as a pivotal tool in environmental conservation, enabling precise mapping, monitoring, and management of natural resources.
- Geospatial technology also enables continuous monitoring and assessment of key climate-related parameters. It provides real-time data on land cover changes, deforestation, glacier melting, sea ice extent, and carbon dioxide emissions.

# Many Countries Continue to Face Systemic Challenges and Impediments

## Where in the World are We?

As of 31 March 2025, the current world population is...

**8.214 billion**

The population of developing countries (excluding China – 1.4 billion) now numbers...

**5.3 billion**

If we include China, 84% of the world's population is from the developing world.

**Less than 1.5 billion people live in the developed world!**

95% of population growth is in the developing world.

**How many of the world's population live in cities?**

TOP 20 LARGEST COUNTRIES BY POPULATION (LIVE)					
1	 <a href="#">India</a>	1,460,607,488	11	 <a href="#">Mexico</a>	131,673,339
2	 <a href="#">China</a>	1,416,905,391	12	 <a href="#">Japan</a>	123,266,293
3	 <a href="#">U.S.A.</a>	346,810,453	13	 <a href="#">Egypt</a>	117,904,293

# Many Countries Continue to Face Systemic Challenges and Impediments

Since 2007, more than half the world's population live in cities, where 70% of global GDP is generated. Today, **56% (4.4 billion) people live in urban areas, projected to rise to 70% by 2050**, when 2 out of 3 people will live in cities. **90% of that growth will be in Asia and Africa.**

# Many Countries Continue to Face Systemic Challenges and Impediments

## I. The current status of the SDGs: severely off track

The progress assessment carried out in 2024 reveals that the world is severely off track to realize the 2030 Agenda. Of the 169 targets, 135 can be assessed using available global trend data from the 2015 baseline to the most recent year, along with custodian agency analyses; 34 targets lack sufficient trend data or additional analysis. Among the assessable targets, only 17 per cent display progress sufficient for achievement by 2030. Nearly half

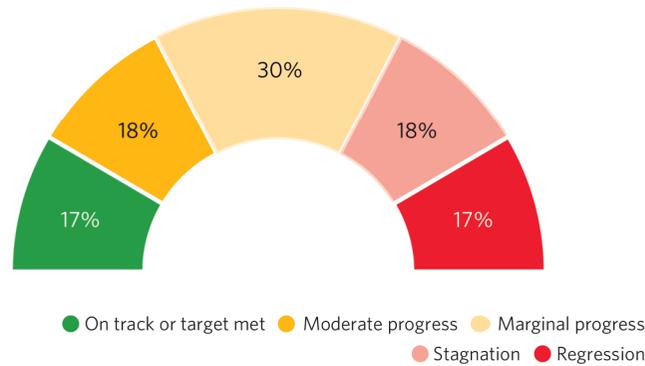

(48 per cent) exhibit moderate to severe deviations from the desired trajectory, with 30 per cent showing marginal progress and 18 per cent moderate progress. Alarming, 18 per cent indicate stagnation and 17 per cent regression below the 2015 baseline levels.<sup>1</sup> This comprehensive assessment underscores the urgent need for intensified efforts to put the SDGs on course. Detailed analysis by target can be found at the end of this report.

Progress assessment for the 17 Goals based on assessed targets, by Goal (percentage)

The Geospatial Digital Divide

# Many Countries Continue to Face Systemic Challenges and Impediments

## Our World is Data Rich... and a Data Desert!

The availability of, and accessibility to, **data**, as a basic human right, **remains the missing link.**

Despite the significant advances in **data acquisition and geospatial technologies** across the globe, many **developing countries still lack the tools and technology** to **track progress** towards the **Sustainable Development** goals.

These gaps make it **challenging** for **countries** to **achieve the SDGs** and make **informed development decisions** that lead to **better policies and investments.**

Countries continue to face **impediments** that limit their ability to address the **adverse impacts** of **climate change, inequality, limited resources, vulnerability to external shocks, geographic remoteness, and institutional challenges.**

**Why?**

**Because much of our data is still largely invisible. Agencies do not know how to best use it and extract the real value, purpose and impact from it!**

# How can Our Professional Community Create Enabling Opportunities for a Digital Generation?

## Ensuring our **Data** has **Impact!**

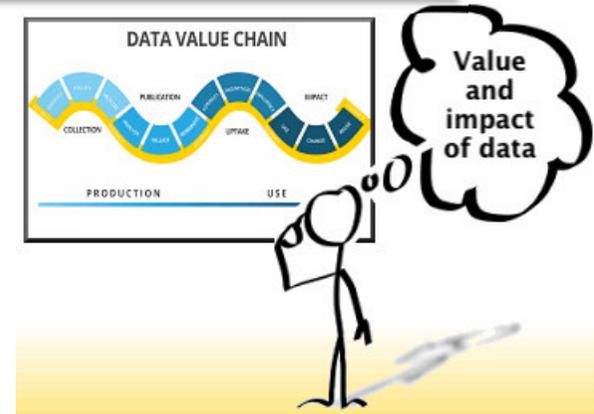

If data is **arranged, organized and structured**, it then becomes the building blocks of information.

Then the real digital data value begins...

From (often integrating) **Data** we build **Information** enabling us to create **Knowledge** (or **Understanding**) which provides with it **Insights** enabling us to then make **Decisions** in such a way as to take **Action** that has measurable **Impact**.

### The Data Value Chain:

**Data > Information > Knowledge/Understanding > Insights > Decisions > Action > Impact**

Collaboration, Innovation and Resilience:  
Championing a Digital Generation

Brisbane, Australia 6–10 April

# How can Our Professional Community Create Enabling Opportunities for a Digital Generation?

## Small Island Developing States (SIDS)

At the **Fourth International Conference on SIDS (SIDS4)** in Antigua & Barbuda in May 2024, world leaders adopted the '**Antigua & Barbuda Agenda for SIDS: A Renewed Declaration for Resilient Prosperity**' (**ABAS**). On 16 July, the UN General Assembly endorsed the adoption of the ABAS.

As a key element of the ABAS, a **SIDS Centre of Excellence (CoE)**, inclusive of a **SIDS Global Data Hub**, was launched at SIDS4.

The **SIDS CoE** and the **SIDS Global Data Hub** will address the many ongoing data challenges faced by SIDS, providing new **data, enabling tools, technologies, capacities and information systems**.

The **SDG Data Alliance** developed, demonstrated and **published** a 'prototype' **SIDS Global Data Hub** to provide tangible insights into what capabilities will be possible for SIDS in the future.

# How can Our Professional Community Create Enabling Opportunities for a Digital Generation?

## Supporting the ABAS and SIDS

Since SIDS4, the **SDG Data Alliance** has continued its momentum to **support SIDS** and the **implementation of the ABAS**, particularly with the **SIDS Global Data Hub**.

This included at **regional** and **global convenings**, including the **UN General Assembly (UNGA)** and **COP**, as well as dedicated regional SIDS Workshops in the **Caribbean** and **Pacific**.

Our strategy for engaging with SIDS to bring them into the SIDS Global Data Hub process is to **engage with countries and stakeholders directly** as regional groupings, initially conducting 'deep dive' 5-day technical **capacity-building** sessions.

## What is the hottest year on record?

COP29

### 2024 is the hottest year on record, EU scientists say

By **Kate Abnett** and **Alison Withers**

December 9, 2024 9:36 AM EST · Updated 7 hours ago

BRUSSELS, Dec 9 (Reuters) - This year will be the world's warmest since records began, with extraordinarily high temperatures expected to persist into at least the first few months of 2025, European Union scientists said on Monday.

The data from the EU's Copernicus Climate Change Service (C3S) comes two weeks after U.N. climate talks yielded a \$300 billion deal to tackle climate change, a package poorer countries blasted as insufficient to cover the soaring cost of climate-related disasters.

C3S said data from January to November had confirmed 2024 is now certain to be the hottest year on record, and the first in which average global temperatures exceed 1.5 degrees Celsius (2.7 degrees Fahrenheit) above the 1850-1900 pre-industrial period.

The previous hottest year on record was 2023.

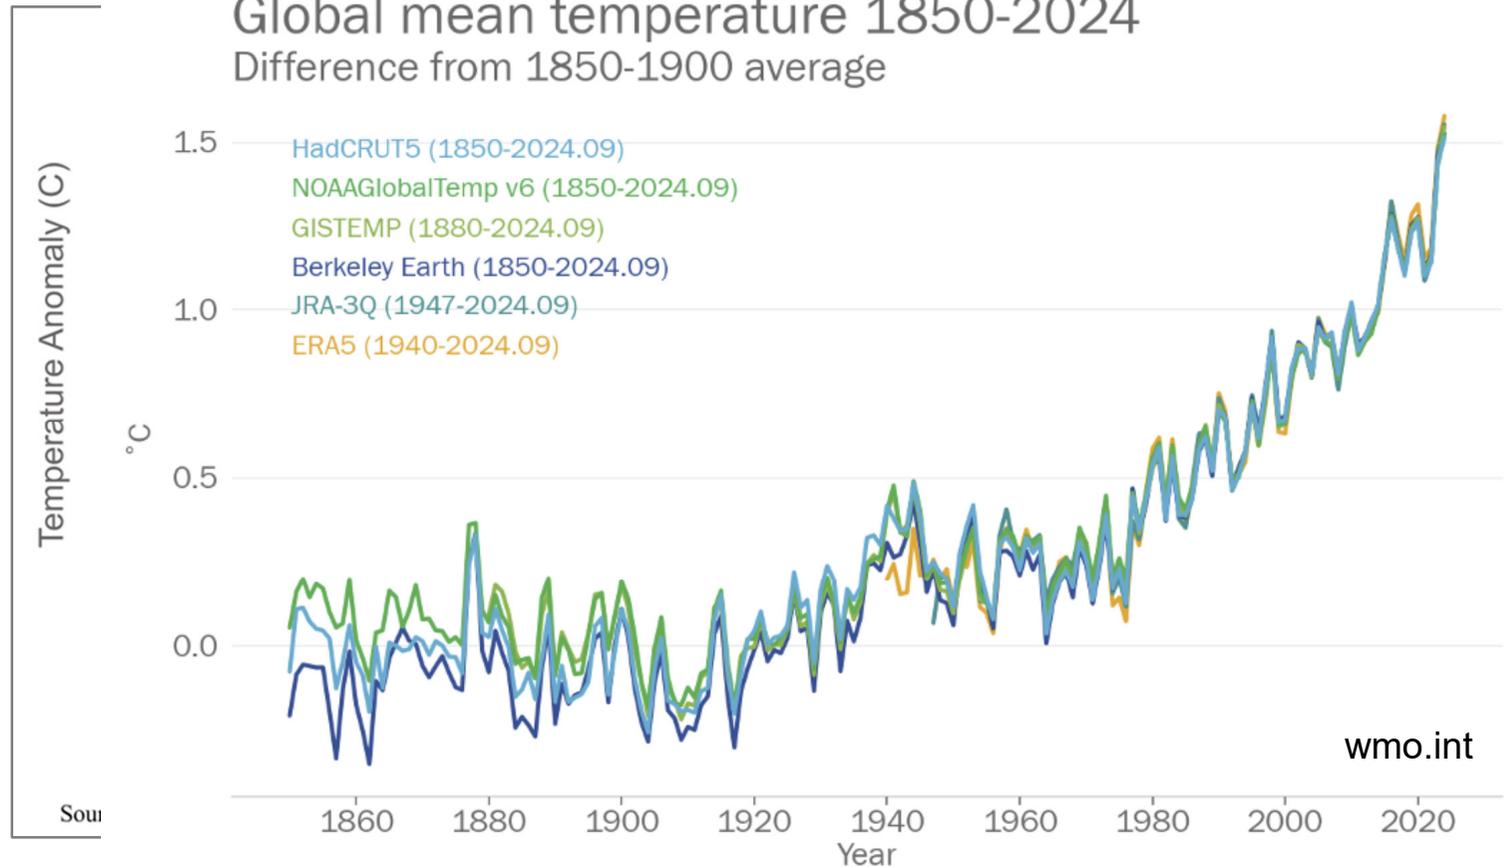

# Contextualizing Data

## CLIMATE

SIDS are particularly vulnerable to the adverse impacts of climate change, including, erratic precipitation, increasingly frequent and extreme weather phenomena, more frequent and severe tropical cyclones, floods and drought, diminishing fresh water resources, desertification, coastal erosion, land degradation and sea-level rise, which represent the gravest of threats to the survival and viability of their people, natural ecosystems, and overall sustainable development. The impacts and implications of climate change on SIDS include humanitarian, economic, social, cultural, ecological and, as exacerbated by other factors, security consequences.
